

Company portrait

We ensure safety. Combined with quality.

When it comes to safety, the highest quality is required – on a large and small scale, in the component as well as in its handling. We are very much aware of this. And that is why we do not tolerate half-measures when it comes to quality. We have always made the strictest demands of the precision, quality and durability of our components. Down to the smallest detail – as a matter of course.

After all, through our regulators and fittings, we are responsible for the safety of users and the functionality of their systems. And we have been taking this responsibility seriously – for more than half a century.

"Uncompromising quality is the basis of our business. Responsibility, safety and reliability are intrinsically linked to this. We have remained true to our quality standards for more than half a century – and as a family-run company we are very proud of this."

Manuel Stöcker, Evelyn Kleine, Andreas Brohm, Dieter Kleine
GOK Management

With values and foresight. And with our feet firmly on the ground.

We develop and produce fittings and components for the safe use of LPG and liquid media.

We are a leading quality provider within Europe. We do not cut corners or compromise on materials and workmanship. What we do, we do right. That is why the name GOK has stood for quality and safety for over 50 years.

Our high-quality products ensure comfortable and safe application of gaseous and liquid media. We achieve this through modern production technology, consistent testing processes during production and a 100 percent test for each finished product.

As an owner-managed family business, we always exercise foresight. We have always consciously developed, manufactured and distributed our products in and from Germany. From the trusting cooperation with our business partners to the lasting bond with our employees – we prefer to enter into long-term relationships.

Value, quality and consistency characterise our business. At every level of value creation, in dealing with the people who work with us and in the production of our components. People who use our products trust us. We are aware of this and repay this trust with the highest quality and reliability.

And: We have always remained grounded and true to our roots. Quite literally. Our entire production has always been located in Lower Franconia. This is also a cornerstone of the best GOK quality.

Quality down to the smallest detail. Our technology.

Whether a component is really good, i.e. reliable and accurate in the long-term, depends on the materials used, the know-how incorporated and the technologies applied. Thanks to state-of-the-art manufacturing processes, we produce first-class products at our location in Marktbreit.

For maximum safety, we attach particular importance to our certified quality management.
No product manufactured by GOK leaves our premises uninspected.

Quality down to the smallest detail. Our technology.

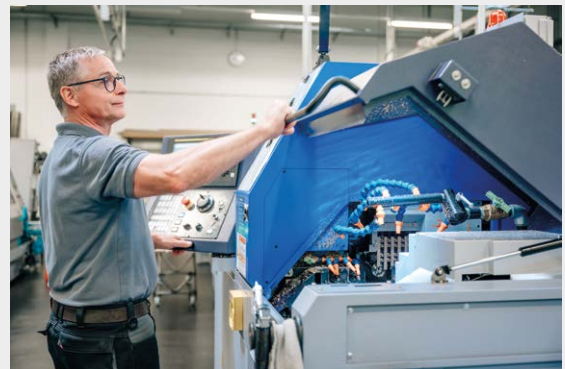

1 Foundry

Modern zinc die-casting machines cast, among other things, the housing of a GOK pressure regulator. The quality of the raw material, a zinc alloy, is regularly monitored by an external institute. A complete first part inspection is carried out before the start of production. Before moving on to the next production step, we check the serial parts for dimensional accuracy and other sources of errors.

2 Mechanical manufacturing and machining

Further components for pressure regulators and fittings are produced by our in-house mechanical production and processing departments. Fully automated CNC production centres produce components in series – following the sample part approval. The raw materials for these processes come exclusively from qualified suppliers. During the production process, we regularly check the produced parts with monitored and calibrated measuring and testing equipment.

3 Assembly

At GOK, people and machines assemble the individual parts that we have produced in the upstream processes to create finished products or assemblies. Depending on the product, this takes place in a fully automated, partially automated or purely manual manner, but always following a sample part approval. Qualified personnel check the most important process parameters; in some cases, the systems also do this fully automatically. During assembly itself, camera and measuring systems continuously check critical process steps. In addition, we perform function and leak tests on a random sample basis. As a finishing touch, pressure regulators and fittings are given special coatings to protect against damage and environmental influences. After the products have passed through the in-house coating system, we check such parameters as layer thickness, coverage and surface finish.

4 Final test

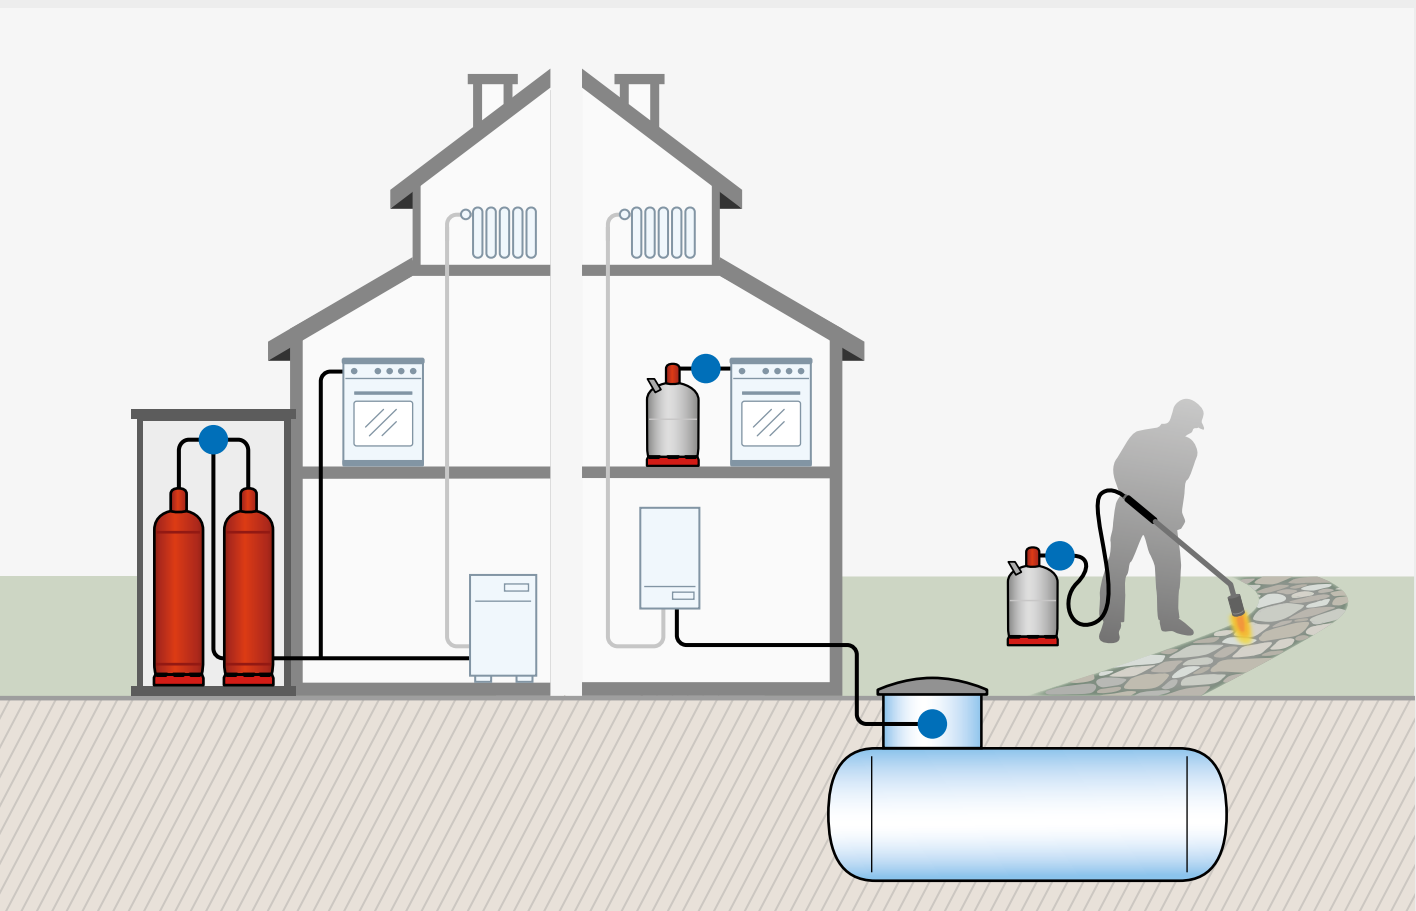

After pressure regulators and fittings have passed through all production processes, there always follows a 100 percent test. A large number of tests are carried out, largely fully automatically, on special test benches. All checks performed during and after the production process support our zero-error strategy to achieve the highest possible customer satisfaction!

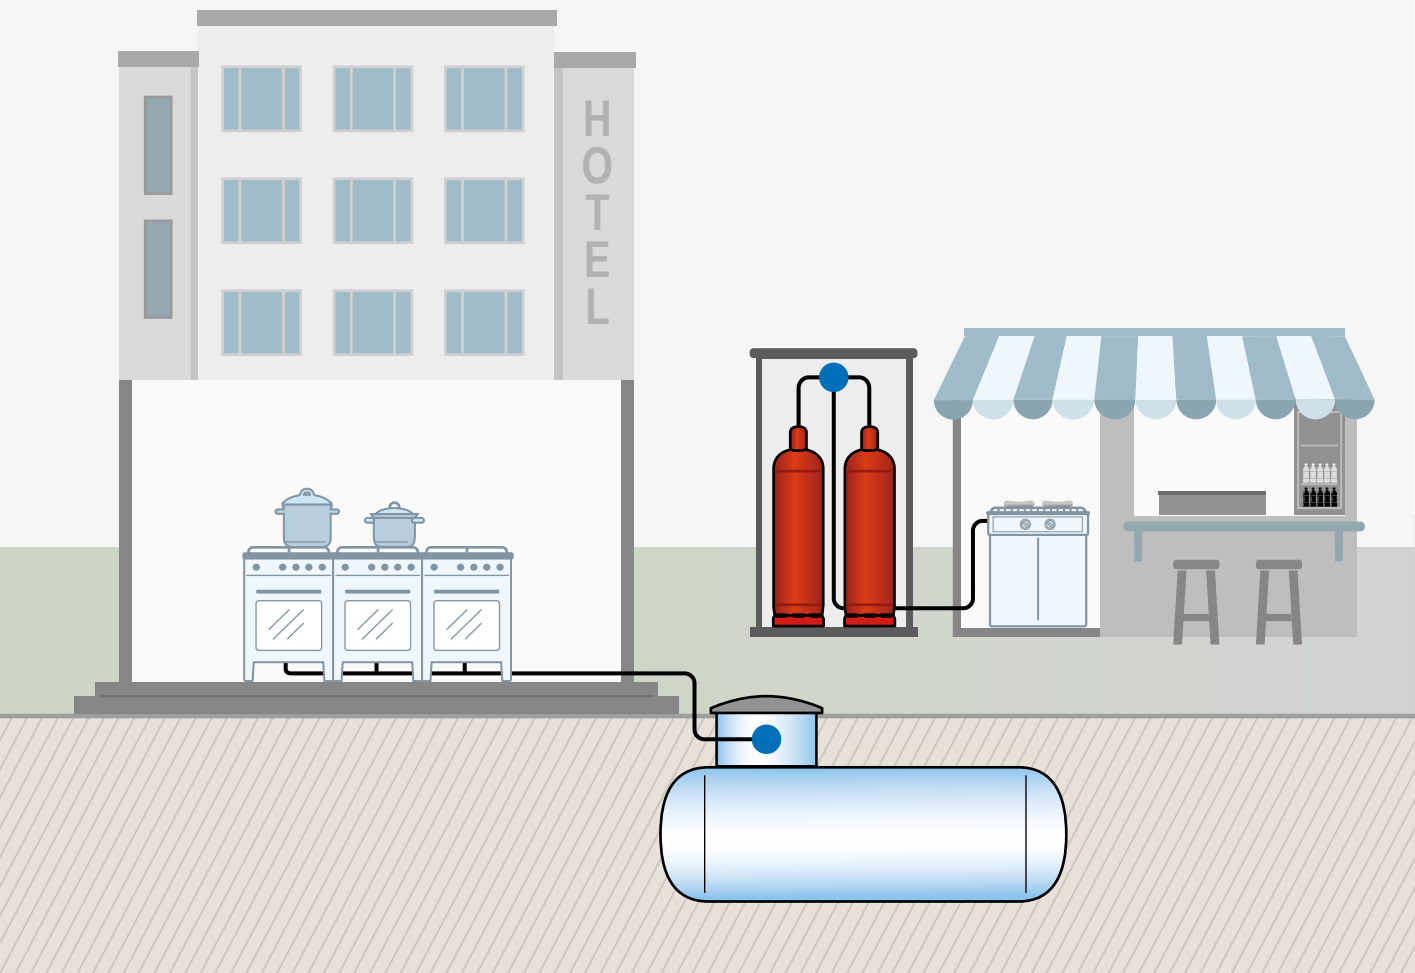

In commerce, household and industry: Safe LPG systems.

Be it double-stage tank regulators for LPG tanks in professional kitchens, pressure regulators with hose assemblies for domestic gas stoves, or burner sets used for heating, burning or soldering – we offer a complete range of technology for everything between the gas tank or gas cylinder and gas appliances.

- High-quality materials
- Highest quality
- Made in Germany
- Robust and durable components
- Versatile applications
- Highest safety standards
- Compliance with standards and regulations

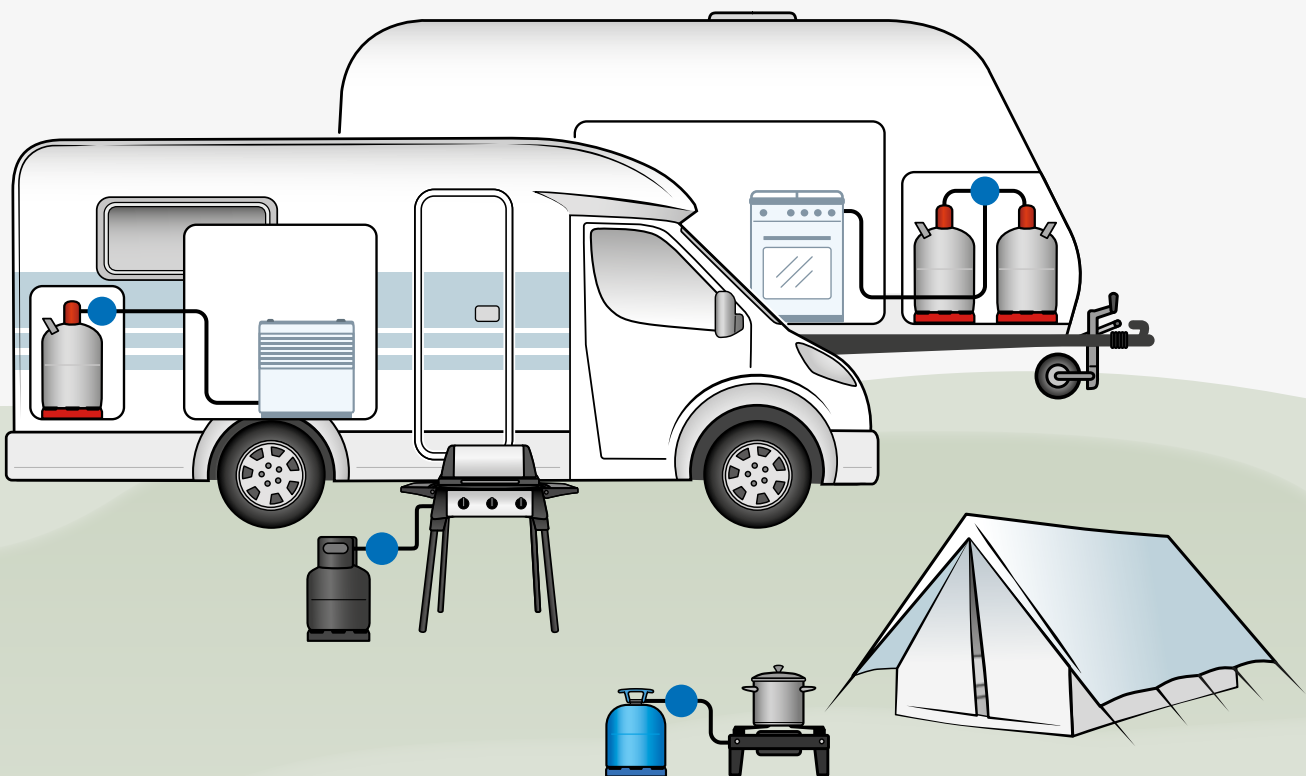

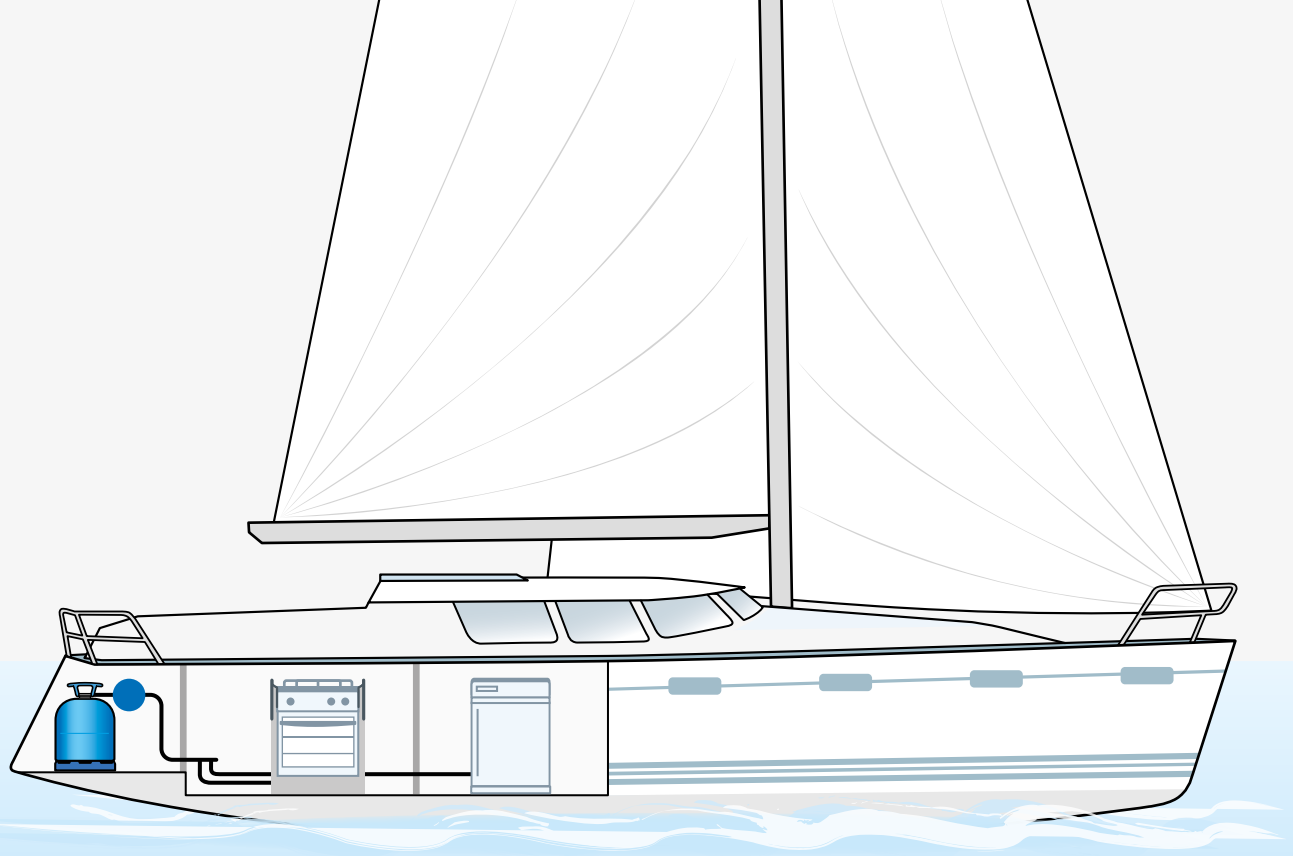

LPG systems for leisure use: Caravanning, camping, barbecuing, marine applications.

When caravanning and camping, grilling and barbecuing or on boats and sailing ships: LPG is usually the mobile energy source of choice. But nothing would work without the all-important components between the gas equipment and the cylinder. We supply everything to make things safer for users, that is all the essential and prescribed parts – along with components to maximize user comfort and convenience.

- Innovative components
- Multi-level safety mechanisms
- End-to-end compatible components
- Weather resistance thanks to high-quality materials
- Highest quality
- Made in Germany
- Easy to use, quick installation
- User-focused, standard-compliant solutions

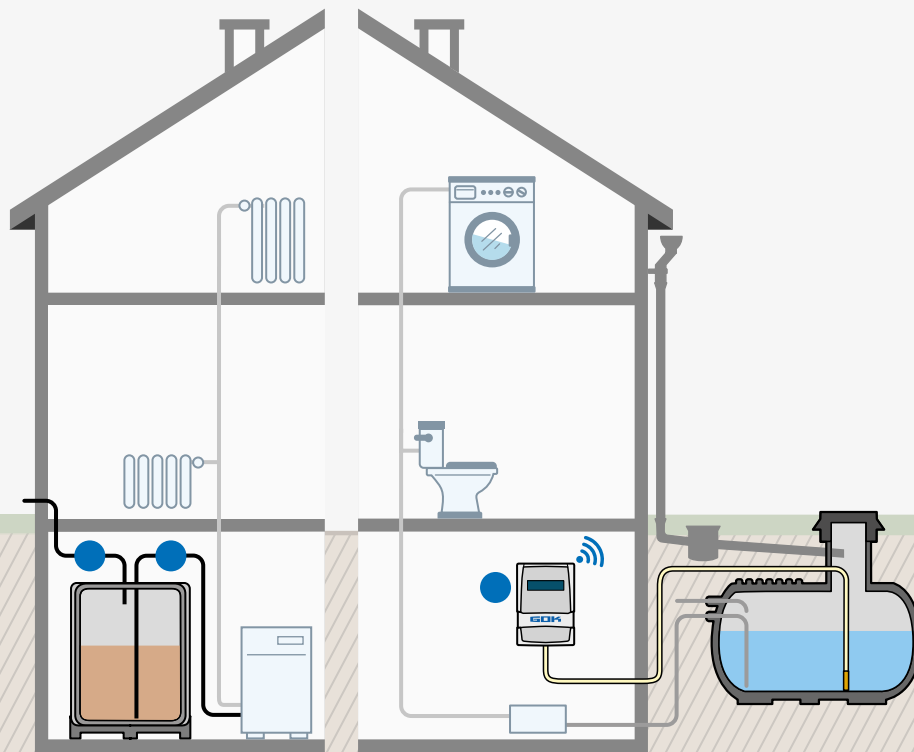

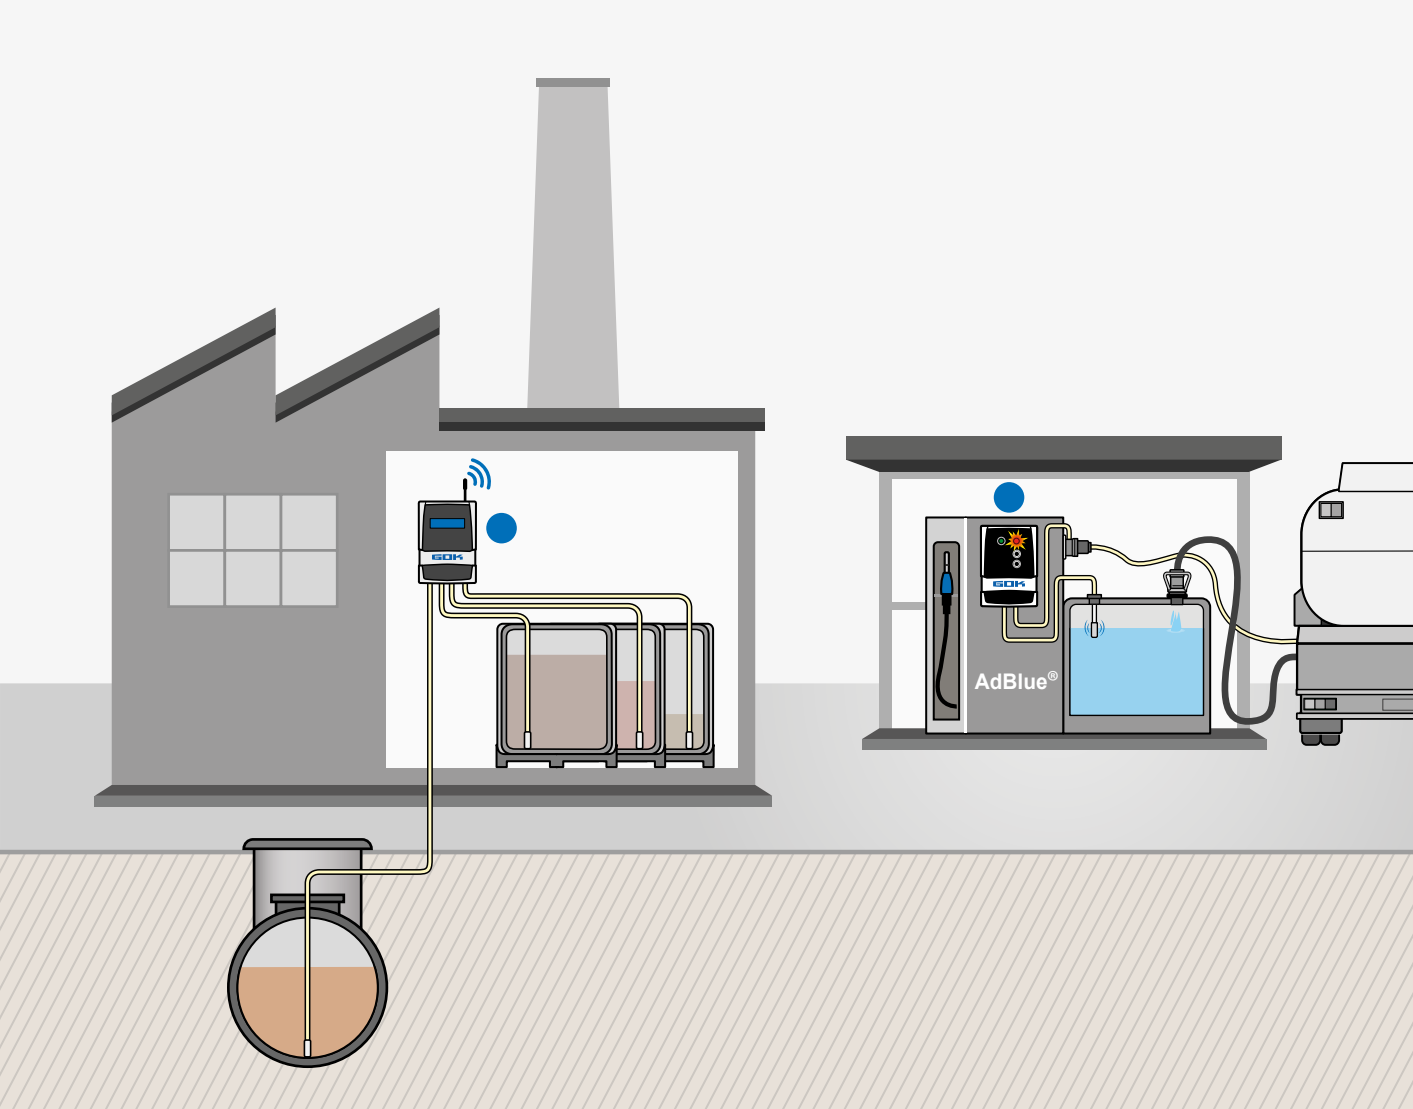

Reliable operation: Tank management and liquid media.

Our products for tank and storage management of liquid media can be relied upon. Whether it is water, AdBlue®, fuel oil, diesel, vegetable oil, industrial oil, lubricating oil or waste oil: Our components ensure long-term safety and reliable operation. Potential leaks are detected and reported at an early stage, filling levels are always known and overfilling is prevented.

- Reliable and durable technology
- High-quality components
- More efficient processes
- Automated warning systems
- Scalable for large and small installations
- Numerous safety features

Who are we?

We are GOK, through and through.

Reliability, values and safety characterise not only our products, but also our everyday working life. Perhaps this can be called the GOK DNA – but perhaps it is just what happens when a family business is managed sincerely and sustainably over many years.

We are the quality manufacturer that we are because of our employees: It is only thanks to the well-trained and goal-orientated team working at GOK that we can keep meeting our exacting quality standards. This team spirit makes us strong – and one of the most attractive employers in the region.

Because anyone looking for security, reliability and a stable working environment is in good hands with us. Whether young or old, from Franconia or the Rhineland, workers or academics, apprentices or managers, old hands or beginners – GOK offers every individual a professional home and development opportunities.

Social security: Working at GOK.

- Work in a family business
- Company pension
- Grants for contributions to capital formation
- Diverse social benefits
- Varied working-time arrangements
- Working time account
- Ideal location
- Job security
- Modern work equipment
- Support for further training
- Holiday and Christmas pay
- Profit sharing

▲ "You can tell that we are a family business. We know one another at every level, and no one gets lost in an anonymous group."

Günther Krauß, Mechanical Manufacturing

▲ "Since having children, I have been using a flexible working time model that I benefit from every day – this makes the double burden much easier to manage."

Andreas Braun, Marketing

Working at GOK.

We offer our employees social security for a worry-free future. The low employee turnover in the company shows just how well this is received: many colleagues have already been part of the team for half their working lives.

▲ "I was the first woman to be able to train here as an industrial mechanic, and the company found the right job for me during my training. I can work independently, receive individual support, and the working atmosphere in the department is great!"

Kerstin Ress, Toolmaking/Stamping

▲ "I did my apprenticeship at GOK and, after starting my career here, completed two further training courses to become a business economist. I am grateful to GOK for the opportunity and trust placed in me."

Jan-Philipp Dürr, Sales

Hand on heart: We can be relied upon.

As a family business, we think, plan and work long-term and sustainably. Honest business practices have always been the basis of our actions. And this is also how we enter into business relationships and cooperations: with foresight, sustainability and trust.

This is another reason why we have a lot to offer.

■ **A strong and valued brand:**

In the industry, GOK stands for quality and safety

■ **High level of service:**

- Personal contacts
- Support with technical matters, sales and marketing
- Training courses
- Always up-to-date and accurate image and text data for online and offline sales
- Press and media relations
- (Sales) support via online media
- Support with system planning, consulting and product range design
- Certified management system

Core market Europe.

Depending on the respective market segment and the target region, we sell to specialist wholesalers, distributors or project customers. We deliver exclusively to commercial customers in the B2B sector.

We largely supply the European market, but increasingly also customers worldwide.

We have components, solutions and systems for a wide range of countries and regions.

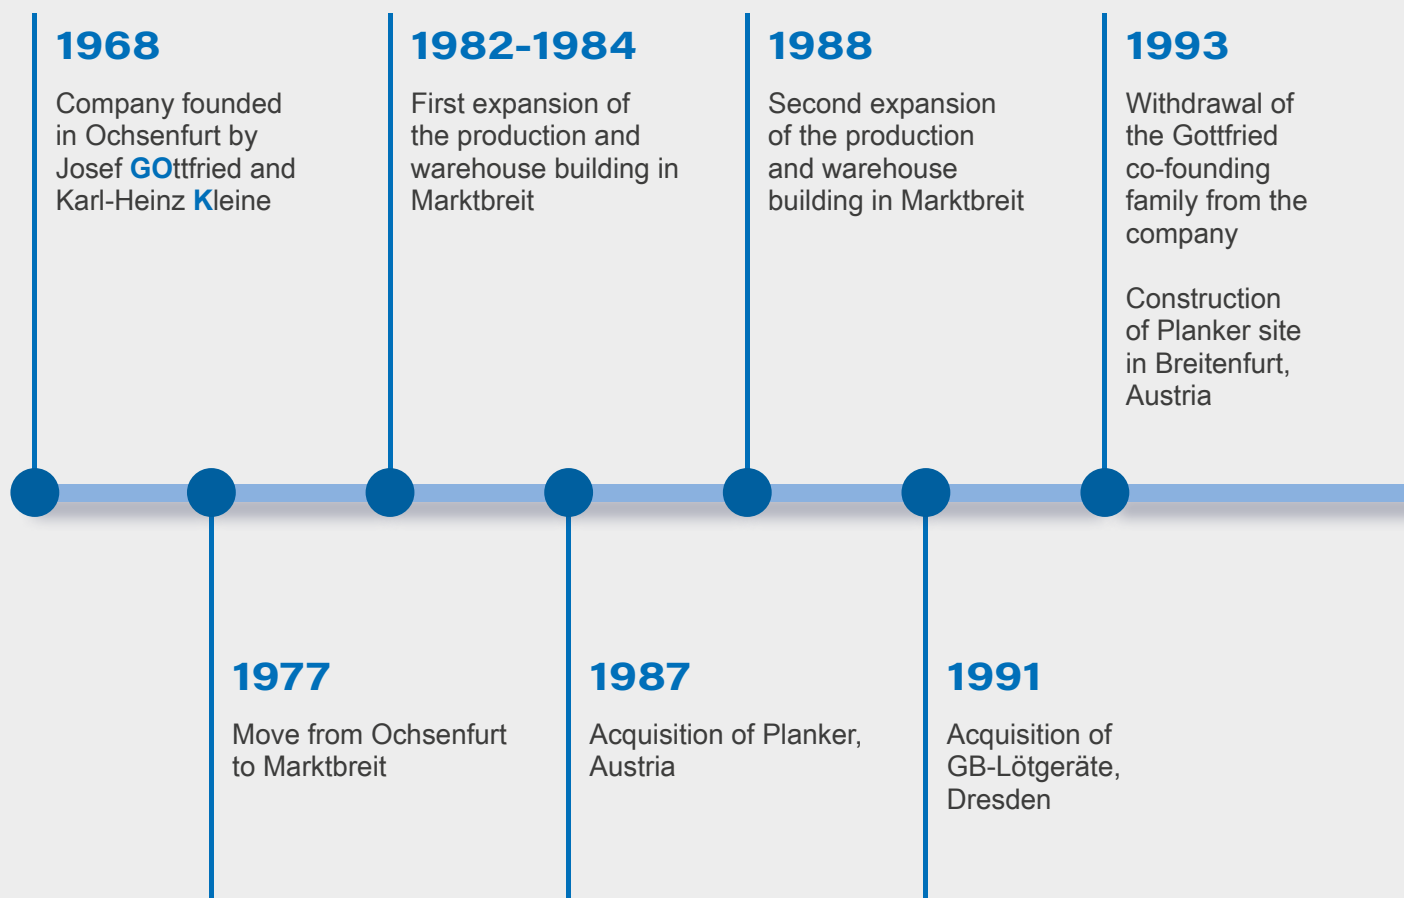

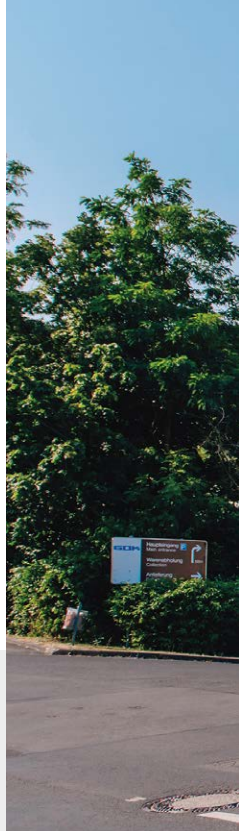

And if we do not have anything suitable right away, we are happy to develop an individual solution tailored to the customer's requirements.

Over half a century.

A lot has changed since the company was founded in 1968, but many things have remained the same. The continuity and stability that an owner-managed family business ensures is indisputable.

Despite the company's long history, we are working hard to add many more significant events to our timeline.

2000

Expansion of production facilities in Marktbreit

Dissolution of the Dresden production location: relocation of foundry, regulator production and paint shop to Marktbreit

2011

Expansion of production capacities for pressure regulators

2024

Further expansion of production capacities for pressure regulators

1998

Dieter Kleine, son of Karl-Heinz Kleine, becomes company owner

2003

Establishment of GOK Polska subsidiary

2022

Own location for logistics warehouse

Sale of the Dresden location

Over half a century.

We are a family.

We owe what we are and how we are to our employees. They are the reason for our success. This gives GOK a responsibility as an employer that we are glad to meet: As a family business, every employee is close to our heart. The high loyalty and long-term dedication to the company speak volumes.

We are a region.

We are strongly rooted in our home region and benefit from an outstanding location. That is why we give something back. For over two decades, we have donated every year to social and charitable institutions in our region.

We are the future.

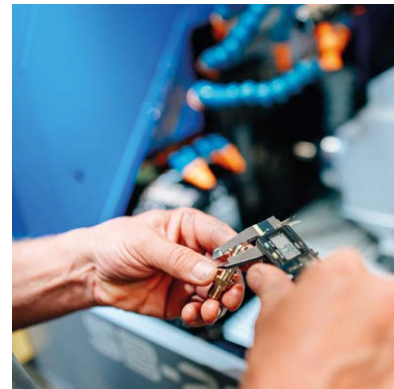

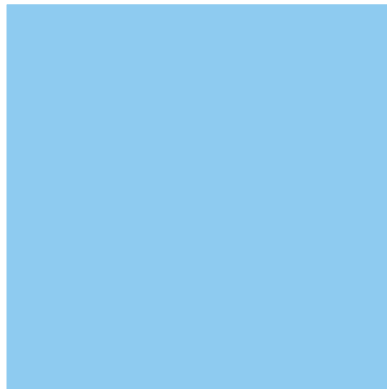

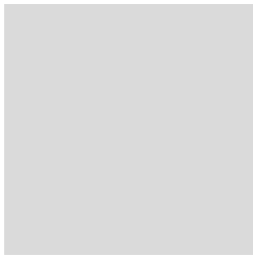

It was clear from an early stage that, with Evelyn Kleine, GOK would have a third owner from the company's founding family. This offers planning security and stability, but also opens up space for something new. As a manufacturer of components that guarantee safety when handling fuels, we are nonetheless aware of the global changes in our times. That is why we are actively using our innovative strength to support the move towards more environmentally friendly substitutes such as bio-LPG, DME or e-fuels.

"We are a family business, we are SMEs, we produce safety-relevant components and: We think about the future. All of this brings responsibilities that we are glad to take on."

The Kleine family, owners of GOK
