Pressure regulator test device – Regulator Check LPG BASIC

What is the pressure regulator test device?

The pressure regulator test device is a complete system for pressure and functional testing of pressure regulators. The test device can be used to quickly and easily test whether the pressure regulator is working properly.

The following individual items, in a durable system case, comprise the pressure regulator test device:

- test hose
- regulator for protection of pressure gauge
- housing block with toggle valve
- low pressure gauge
- adapter for compression fitting 8
- ventilation hose

Where can I use the pressure regulator test device?

The test equipment is suitable for testing pressure regulators up to 80 mbar

- in leisure vehicles such as caravans and motor caravans
- in small water crafts such as boats and ships

What are the benefits?

- checking the flow and closing pressures of low pressure regulators
- safe drainage of LPG in open air using a 1.5 m long transparent ventilation hose
- pressure limiter prevents damage to the pressure gauge
- no uncontrolled escape of gas through self-closing test valve
