Electronic pressure regulator test device – Regulator Check LPG PRO

What is the electronic pressure regulator test device?

The electronic pressure regulator test device is a complete system for pressure and functional testing of pressure regulators. The test device can be used to quickly and easily test whether the pressure regulator is working properly. Values can also be recorded with the help of the integrated data logger and read via the interface.

Available from 1st quarter 2023

The following individual items, in a durable system case, comprise the electronic pressure regulator test device Regulator Check LPG PRO:

- 750 mm test hose line
- adapter for compression fitting 8
- 1500 mm ventilation hose
- connection/charging cable

Where can I use the pressure regulator test device?

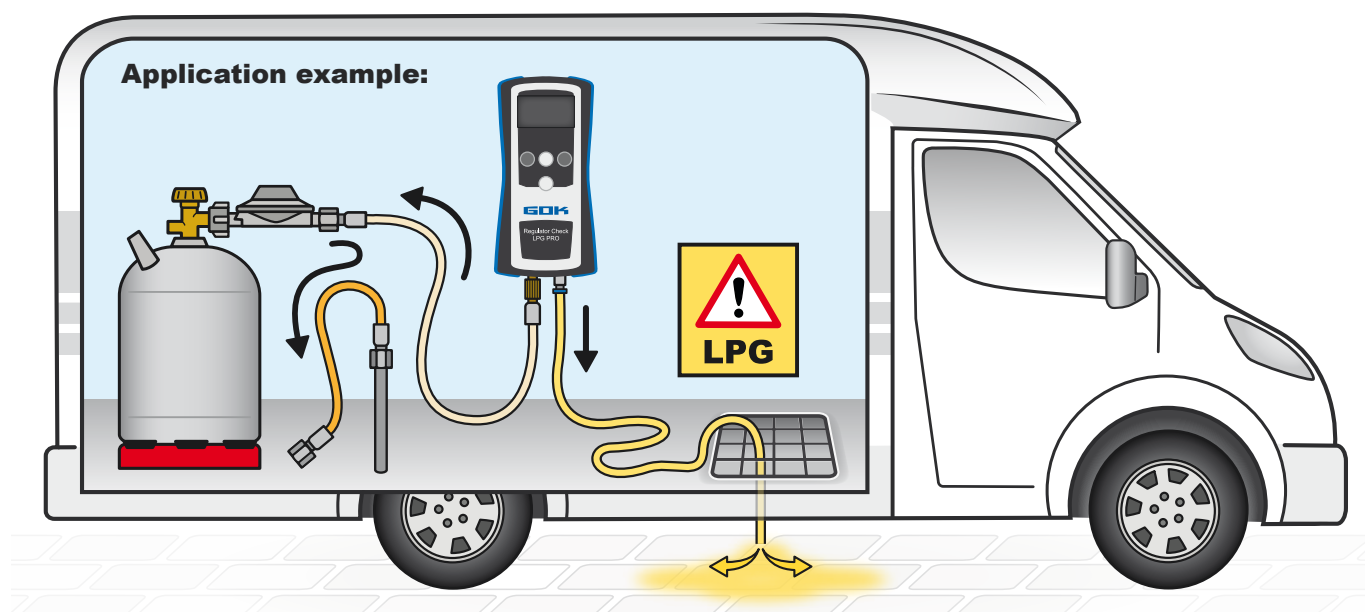

The test device is suitable for testing pressure regulators up to 160 mbar

- in leisure vehicles such as caravans and motor caravans
- in small water crafts such as boats and ships

What are the benefits?

- checking the flow and closing pressures of low pressure regulators
- safe drainage of LPG in open air using a transparent ventilation hose
- transfer of data to a PC via USB interface
- no uncontrolled escape of gas through self-closing test valve
